## About This Game

You have levels to beat. You have body to control. But really special feature is that you can make your own animations which aren't just visual like in almost all other games, but 100% physics based, so they define how you move through the environment.

Animating is relatively easy, you can make good animation in a minute, then assign it to a button and you can use it in current level or any level you wish! However, there are also default animations from beginning.

## Genre

Cybermotion is 2D platformer based on physics. Players are also able to make own unique animations that define how the robot moves through the environment. The goal is to finish levels in time, win medals, unlock new content.

## Controls

Controls are inspired by controls of real humanoid robot. You'll switch between full body animations which are assigned to the buttons, or you can control each limb manually. Servos in your robot are trying to follow these animations, but they have to deal with gravity, mass and other static or dynamic objects.

## Upgrades

You can add and upgrade many functions of your robot. For example you can upgrade armors, processors, servos, batteries and more. At the beginning, you can barely walk under weight of your body. In the end you can be overpowered beast that can finish level with just one powerful jump.

---

## **Animation editor**

Anytime, you can pause the game, make new move in animation editor, assign animation to the button and use it instantly, or in any other level later. For example you need faster animation of getting up from the ground? Or you want to kick some ball?

Crawl through the tight hole to get something? It's up to you.

## **Story**

Cybermotion has no storyline. However key background is University of Cybernetics where are few students working together in team, trying to finish their final assignment and get degree in cybernetics. They choose to build and program robot that can move like a human in complex dynamic environment. Their Professor of Cybernetics (who is also Professor of PE) is testing their work the hard way and gives them nothing for free. Except for some spare wires and scrap parts...

### **Future Of Cybermotion**

I would like to implement steam workshop for sharing user animations and levels.

this game is great. the physics is good, it's challenging, it's fun and i cant reccomend it more, it seems like your getting the experience of a 12 dollar game yet you can get it for only 8!

This is so far one of my favorite games and thats next to juggernauts like garry's mod and tf2. play this game.. Finally a physics game that has some effort put into it, not just a stickman with a white background.

I only have 15 minutes into the game and I haven't even learned how to walk.

A great challenge and game is well made.. the game is really fun, and over-all challenging, but i lack the ability to delete my game progress so that i may play smarter with my upgrades. i dont think i will play for a while until is future is added.. FAT JUCIY YES. This game is so much fun! I have really high hopes for this game and it has a lot of good things about it, there is only 1 negative point and that is that the language is not always 100% correct, but this doesn't affect the gameplay.. Really great game, very enjoyable and unique experience, with the great "easy to play, hard to master" difficulty that makes most games wonderful. Physics are also done very well and I have yet to see any physics errors.

---

This is a wonderful game. The physics are really good and the levels are fun but hard. There is a level editor if you want to make your own levels. The controls aren't too hard when you get the hang of them and if you don't like them you can change them by animating your own. If a steam workshop is added to this game, it could add so many possibilities with sharing levels and animations. For being an early access game it is one of the best that i have tried. I love this game and can't wait to see what it will be like in the future.. Cybermotion is a game with lots of potential. The idea behind it is good, the gameplay is fun and unique, and to top it all off, a game developer who is open to the community who is playing it!

I definitely recommend Cybermotion to anyone looking for a good game to spend some time playing!. its a very very good game. gets difficult arfter a while... i played it and got stuck on a level and now i never play it anymore.. so i like the idea of the game and i watched some people play it on youtube and i loved it! went on steam and bought it but...it keeps crashing... i tried the other way to start it (the CPU graphics thing) and it sometimes crashes and sometimes starts but with no display of the game, i did some troubleshooting and its not compatible with my computer so i guess i'll have to wait till my other good computer is fixed...bummer... for now i'll tease myself by watching people play it on youtube xD. this is dark souls, but it takes place in Boston dynamics

if you want a game that needs you to tame it, you've found a good title. also, sick roboparkour!. This game is a game that does have potential. The games creator has more plans in the future from looking into the save location so if your wanting to get this game just get it its 8 dollers and it is a very good game and has more in store than just the 25 levels it has atm. And more upgrades more armors more arms more levels this is basicly a qwop metroidvania but a little bit easier than qwop.. difficult but really good. The Dark Souls of QWOP
