So this is the component with the request: export class UpdateUserComponent implements OnInit { users: User[]; user: User; userForm: FormGroup; constructor(private formBuilder: FormBuilder) { } ngOnInit() { this.users = this.getAllUsers(); console.log(this.users); addUser() { console.log('ok'); this.user = new User(); this.userForm = this.formBuilder.group({ user: ['', Validators.required], password: ['', Validators.required] }); this.postUser(this.user); postUser(user: User) { let headers = new Headers(); headers.append('Content-Type', 'application/x-www-form-urlencoded'); headers.append('Accept', 'application/json'); let options = new RequestOptions({ headers: headers }); let body = JSON.stringify(user); console.log(url); this.82157476af
